

# ASSETS Galore

*Google is Beautiful, Google is Life – Anonymously Said Everywhere*

***If you find anything awesome that should be on this list, feel free to edit the doc file then commit both the doc and the new pdf~***

Note: Keep track of where you get your assets from

- ➔ Only certain licenses - particularly royalty free - we can ship with
- ➔ If you're using assets without permission, we'll have to replace 'em later (before shipping it, ie Friday)
- ➔ If you have too many assets that aren't used, please delete them. A project can easily get really bloated and massive due to multiple packages of assets that either aren't used anymore or only used for a single asset (feel free to download several sets for testing, but delete what you're not going to use afterwards if you know you're not going to use them in the near future)

## Unity 3D's [Asset Store](#)

- Completed games, multiplayer handler scripts, textures, music, you name it
- Not everything is free, but feel free to drop your own money for the team (and hand me the goods for later, personal use)
- Suggestion: Use the search bar with the word "free" (even try just searching "free")
- When importing assets, they'll automatically go in the root Assets folder. Remember to move them into your own personal folder, for "just in case" reasons for now

## Reddit's [/r/gamedev's List](#)

- Has a single link at least for everything- music, sounds, 3D models, etc
- Has a simple description for each

## MakeSchool's [20 Best Free Art Resources For Game Developers](#)

- Everything from music, fonts, buttons, tiles, etc.
- More specific examples with descriptions

## letsmakegames.org's [Assets List](#)

- Personally really like this one
- Very complete with many links and really good descriptions

*I was personally planning on tacking on individual categories, which I may do at some point. Fortunately, these links above ran me out of that job. Feel free to add individual categories below.*
